

# Click 'n' fit.

Click 'n' fit is an innovative way to measure your child's feet. Simply print the grid overleaf, take three photographs of each foot, and upload them to [startriteshoes.com/click-n-fit](https://startriteshoes.com/click-n-fit).

1.

## Printing the grid.

Ensure your printer is set to 100% or 'do not scale', and 'auto-rotate and centre' is selected.

If the grid isn't printed to scale the photo's will not process, or will return an incorrect size.

2.

## Setting up.

Ensure your child is wearing plain (ideally white) socks and roll up trousers slightly.

Place the grid on a hard, smooth floor – not carpet as this can distort the grid.

Switch the flash of your phone or camera on.

3.

## Photo ready.

Place one of your child's feet in the centre of the grid, making sure it's straight – you need to be able to see the grid all the way round the foot.

Keep the leg straight (bending their knee slightly should help) and ensure the other foot is not in view.

4.

## Taking the photographs.

Make sure the whole piece of paper is visible on your phone or camera screen, and ensure you are lined up square to the outside of the foot.

Kneel on the floor – so that the angle of the image is correct – and take a photo of the outside of the foot.

5.

## Getting your size.

Repeat the above for the inside of the foot, and for the top of the foot – move round your child to ensure their foot remains in the same place.

Pop back to [startriteshoes.com/click-n-fit](https://startriteshoes.com/click-n-fit) to upload your images and calculate your Start-Rite size.
